GRP Junction Box Enclosures are used for outdoor application with weatherproof and antistatic properties, finding their major application in housing switches, sockets and the associated wiring connections. These enclosures are smaller in size and have an IP rating of IP66. They protect connections carrying electrical current and remove the requirement to run a direct wire from every outlet or switch back to the main service panel. They are primarily used as Cable TV and Telephone boxes which include built-in terminals. They are certified to match specifications in the GCC region, United Kingdom and Europe.
